

ERRATA

IMBEDDINGS OF DOLD MANIFOLDS

(This journal Vol. 12, pp. 71—80)

Takuo FUKUDA

I made an error in the theorem 1 in the paper. I use the same notations as before. The error is in the proof of the theorem, where I attached $D^{m+1} \times PC(n)$ to \bar{V} in the $(k+1)$ -space. But this is concerned with the isotopy classes of imbeddings of $S^m \times PC(n)$ into the euclidean spaces, so the theorem is not true in general. In conclusion, I have to abbreviate the theorems 1 and 2, because the theorem 2 is due to the theorem 1. I am much obliged to Dr. J. J. Ucci for his kind advice.
